

## BLUEPRINT

# End-to-End Solutions

**Tailored security – from design to operations, from a single partner.**

Tools from different vendors often don't work together, leaving gaps an attacker can slip through. We design and deliver a solution that fits your environment, risks and budget – and make sure all the parts work as one.

## What it covers

- needs analysis and assessment of the current state
- architecture design and technology selection
- implementation, integration and configuration
- training for your team and full documentation
- operational support and continuous improvement

## How we work

- 1 We listen to your needs.
- 2 We map your environment.
- 3 We identify potential weaknesses.
- 4 We design a working solution.
- 5 We help you implement it.
- 6 We keep an eye on operations.

## What you get

- one point of contact and clear accountability
- a solution that fits together and is well documented
- a gradual rollout without unnecessary downtime
- security that grows with you

**AI**

**AI in practice** Where it makes sense, we include AI in the solution – for example to triage events or automate routine steps.

**Who it's for** organisations that want to approach security systematically without coordinating several suppliers.

**Let's design the right solution for you.**
